TAR STRIP

Introduction

This is a solvent degreaser and tar cleaner, used mainly in workshops, garages etc. It consists of a mixture of aromatic and aliphatic hydrocarbon solvents, blended with penetrants and emulsifiers for maximum grease, heavy soil and excess tar removal. It has a high flashpoint making it ideal for mining institutions. Before using on painted surfaces, a compatibility test should be carried out.

Advantages

- Fast and powerful action
- Non-offending odour
- Free Rinsing
- Low toxicity

Physical Properties

Colour:	Straw
Odour:	Solvents
Viscosity:	Like water
Appearance:	Liquid

Methods of Application

Use neat by applying by brush or spray. Agitate and allow to stand for a short period of time before re-agitating with a brush and rinsing off with clean water.

Toxicology and First Aid

If swallowed, drink an excess of water and seek medical advice.

The recommendations herein are based on laboratory tests and in field use experiments. To the best of our knowledge these are accurate and since conditions of actual use are beyond our control, all recommendations are made without any warranty whatsoever.
